

When the assigned teacher clicks **Attendance** from the Dashboard, the system does not automatically open the attendance page for the teacher's **particular assigned class and section**. Instead, the teacher is taken to a general attendance page where the class and section are not properly selected, resulting in **"No students found."**

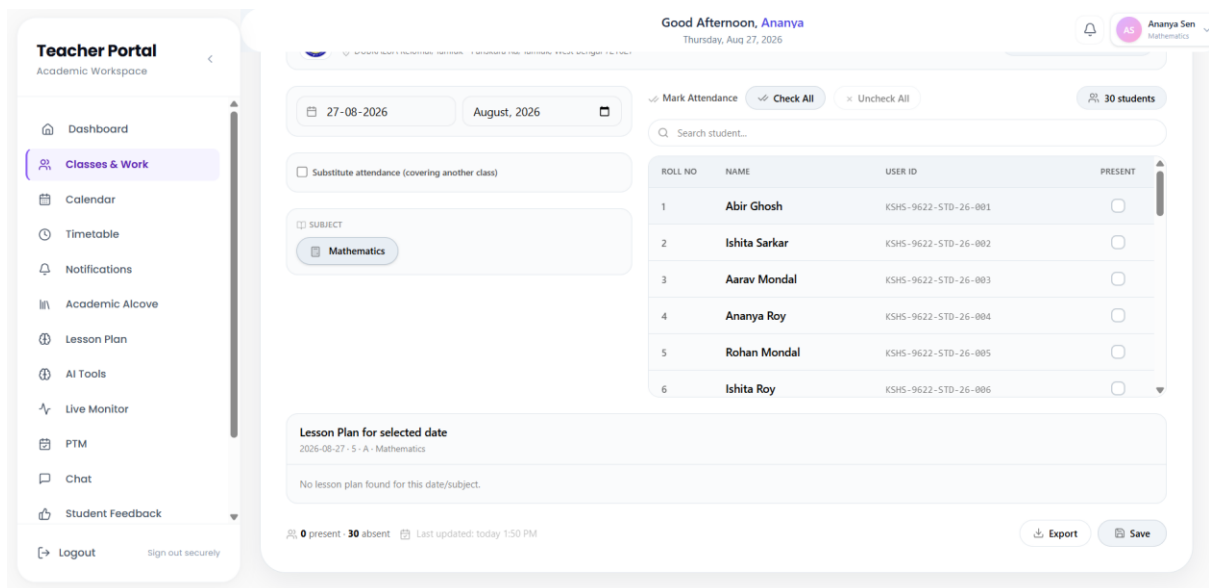

When the assigned teacher clicks the Class dropdown, they are unable to select their particular assigned Class and Section. The dropdown should display and allow the teacher to select only the classes and sections assigned to them, so they can access the correct class.

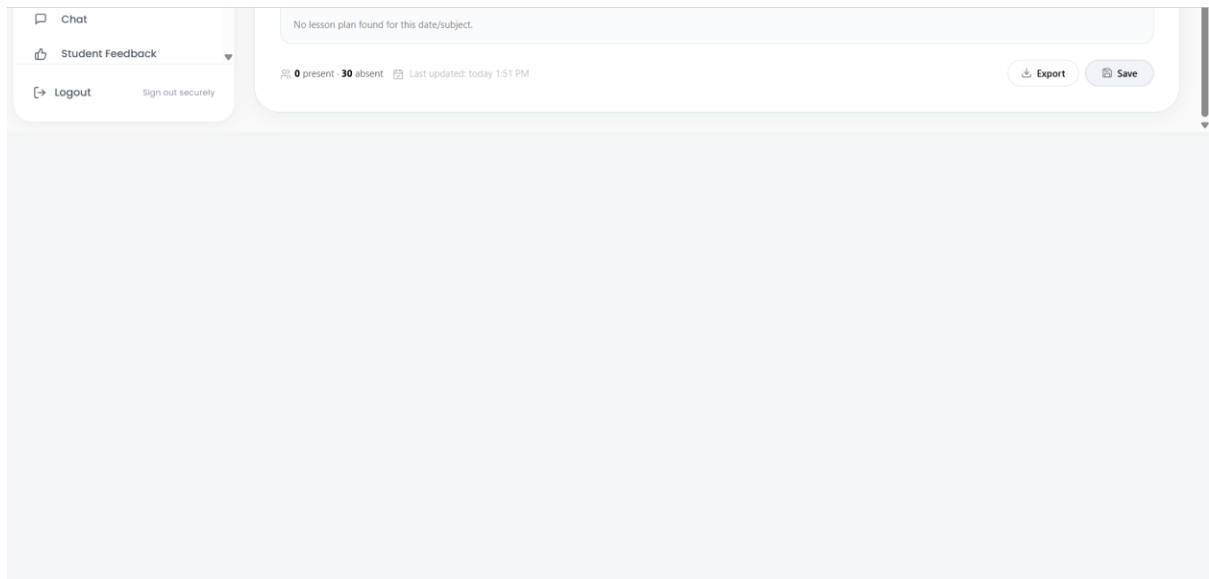

Why is the assigned teacher unable to select their particular assigned **Class and Section** from the Class dropdown?

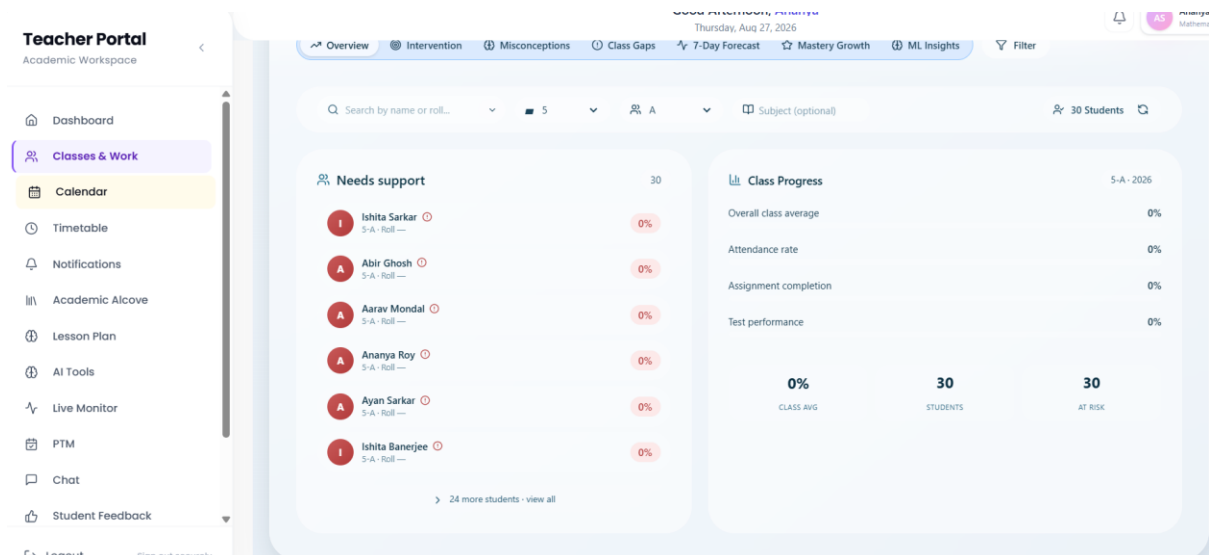

Why does clicking the **Attendance** button on the Teacher Dashboard not redirect the teacher directly to their **assigned Class and Section**? The system should automatically open the attendance page for the teacher's particular assigned class and section.

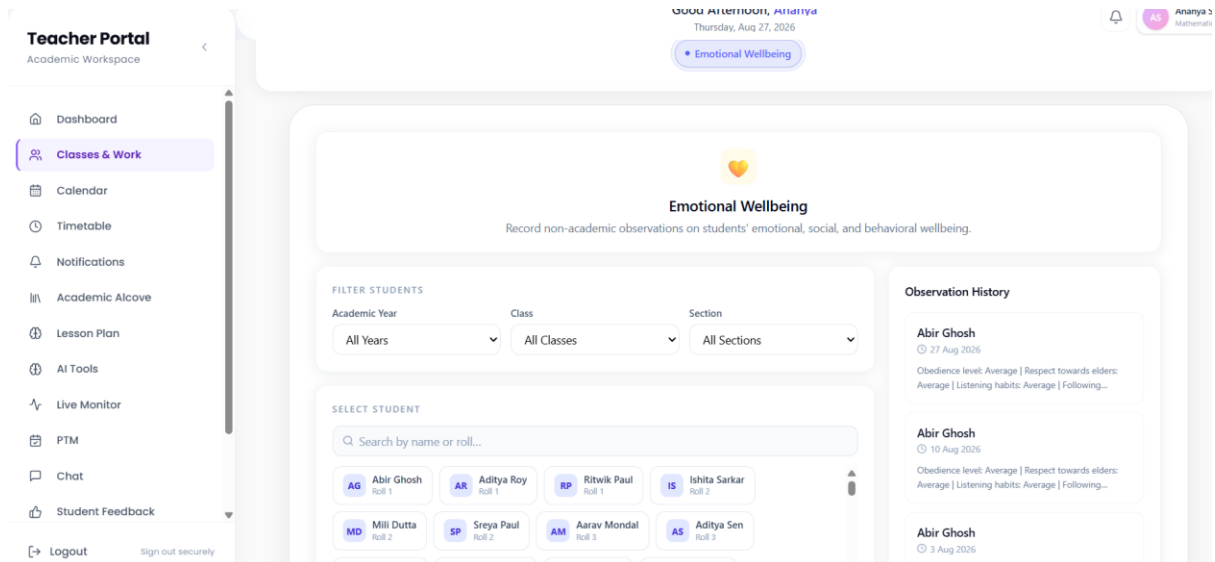

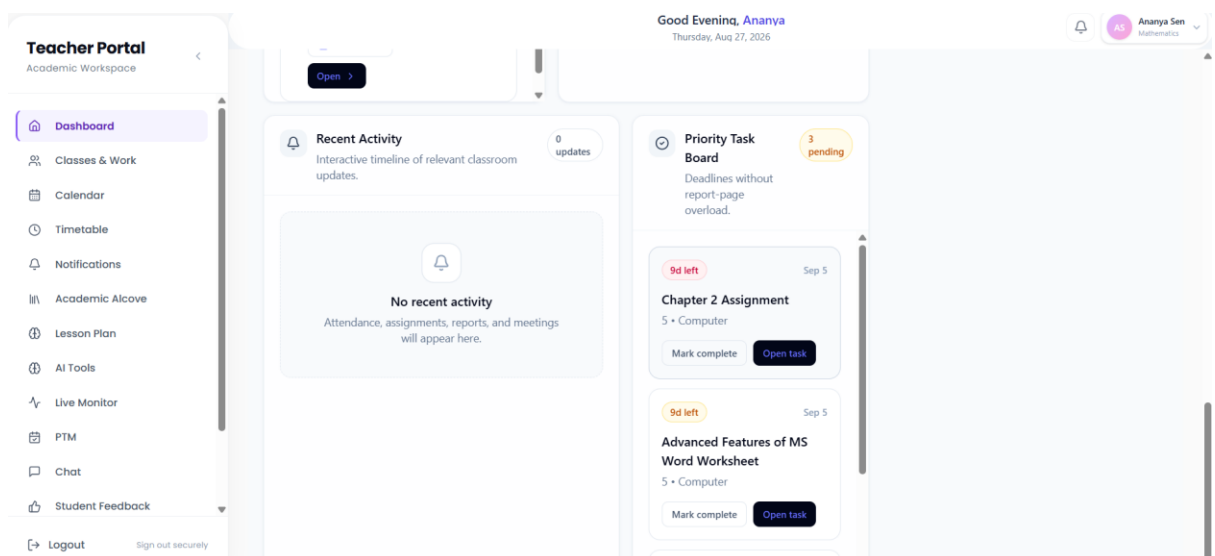

As an assigned class teacher, why does the Attendance page have a large empty space below the content, causing unnecessary scrolling? The page should fit the available content properly without excessive blank space.

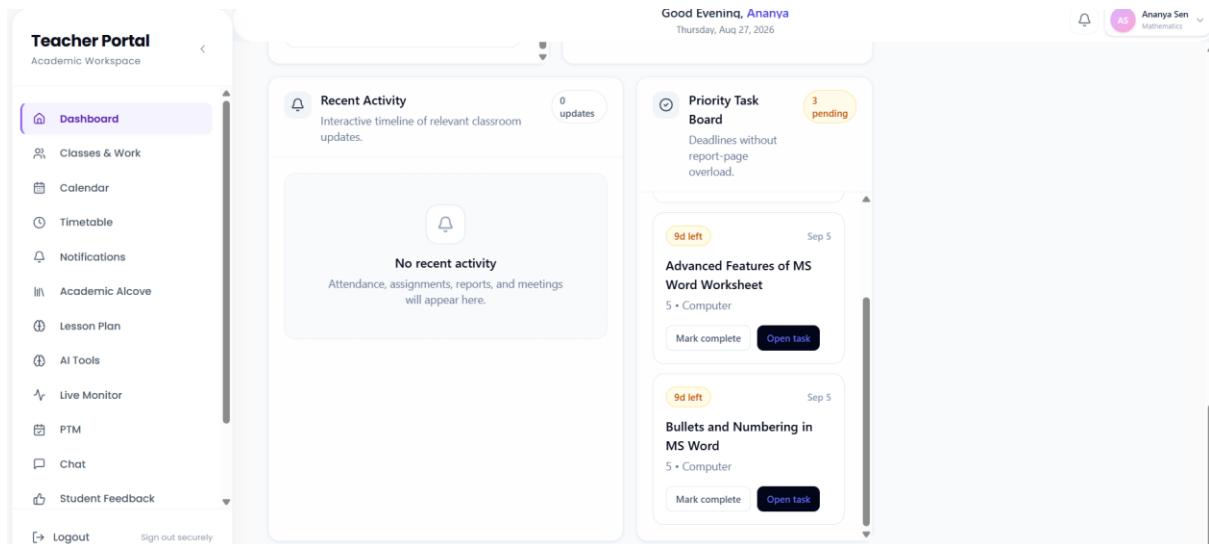

In the **Assigned Teacher** section, the **Needs Support** percentage is always showing **0%** for all students.

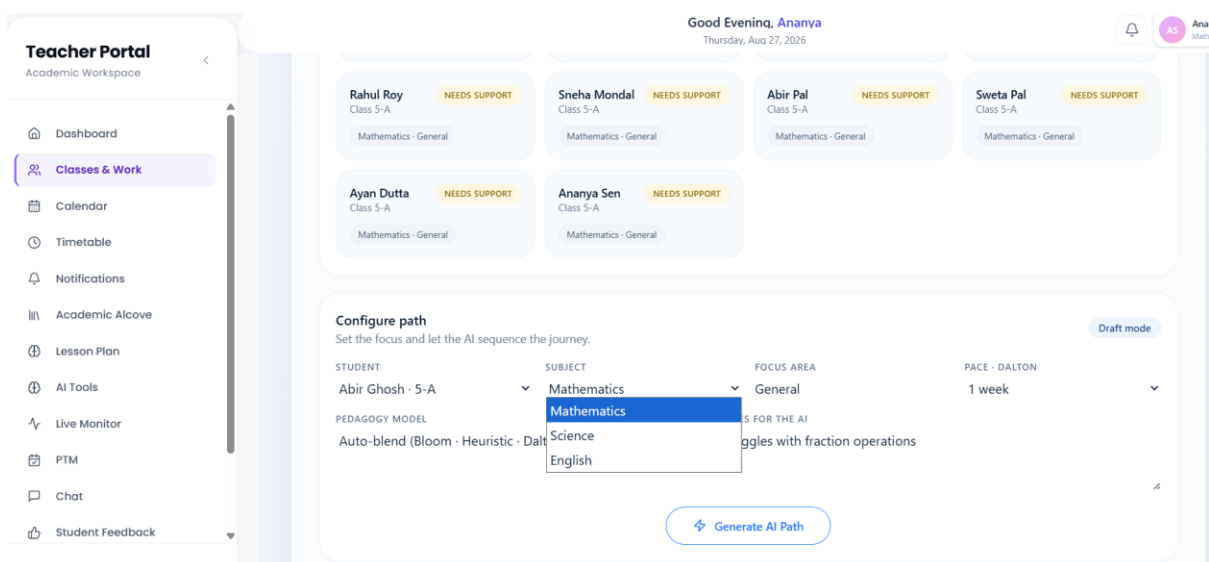

In the **Assigned Teacher** section, the **Observation History** is not fully visible. The observation details are cut off, so the complete history and information cannot be viewed properly.

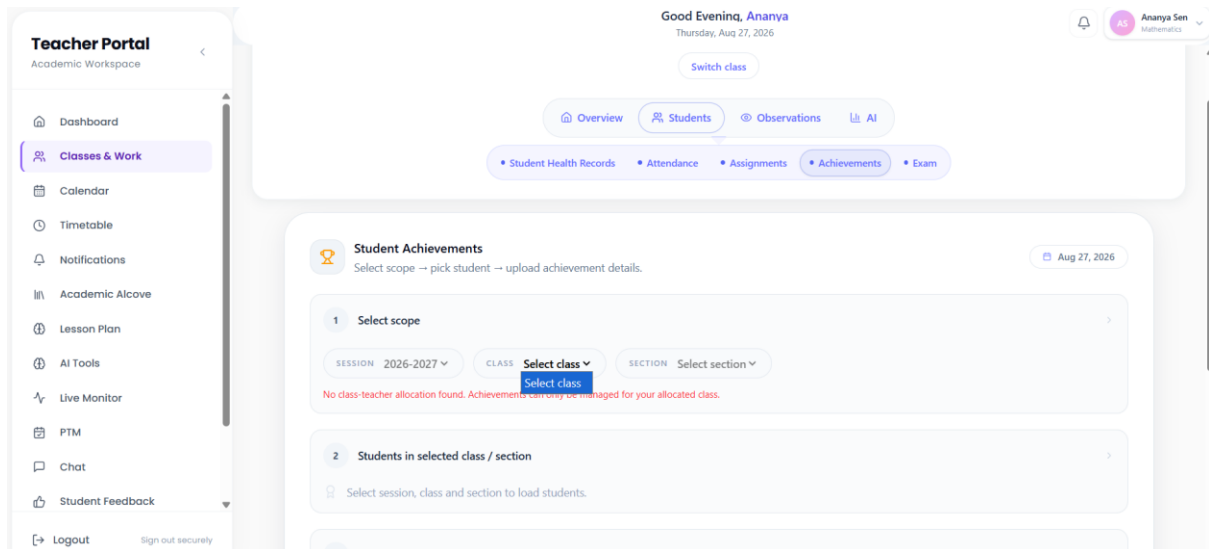

In the **Assigned Class Teacher** section, the **“Mark Complete”** button is not working. When clicked, the task/status is not updated or marked as completed.

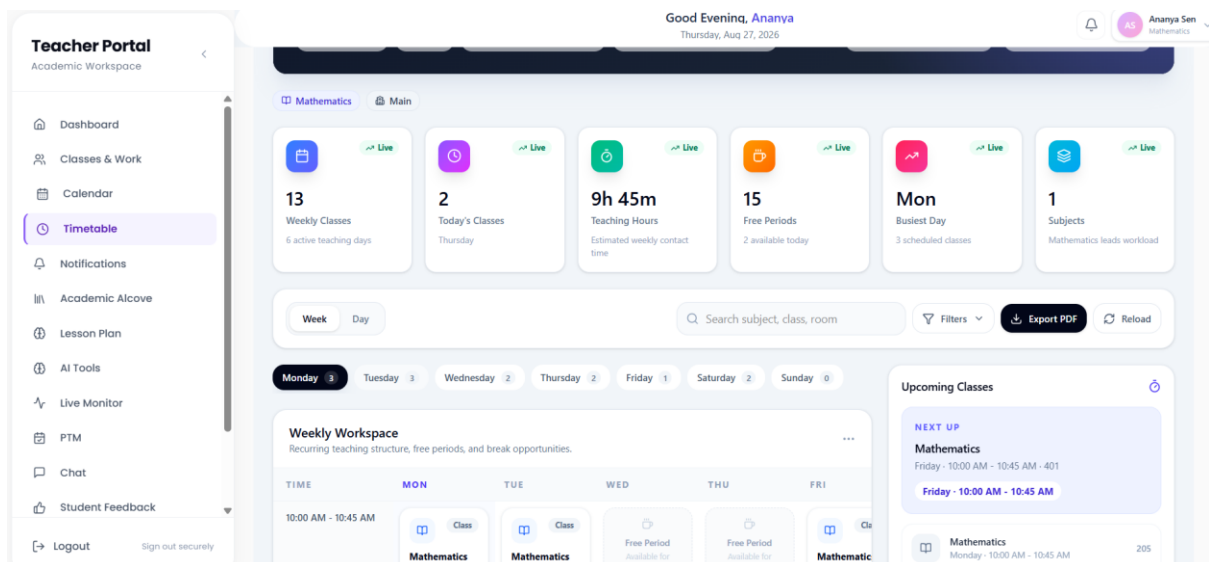

In the **Assigned Class Teacher Dashboard**, the **Recent Activity** section is not displaying any activity. It only shows “**No recent activity**”, even though relevant classroom activities or updates should be visible.

In the **Classes & Work → AI** section, the **Subject** dropdown should display all subjects for **Class 5**. Currently, only **Mathematics, Science, and English** are visible. All Class 5 subjects should be available in the dropdown.

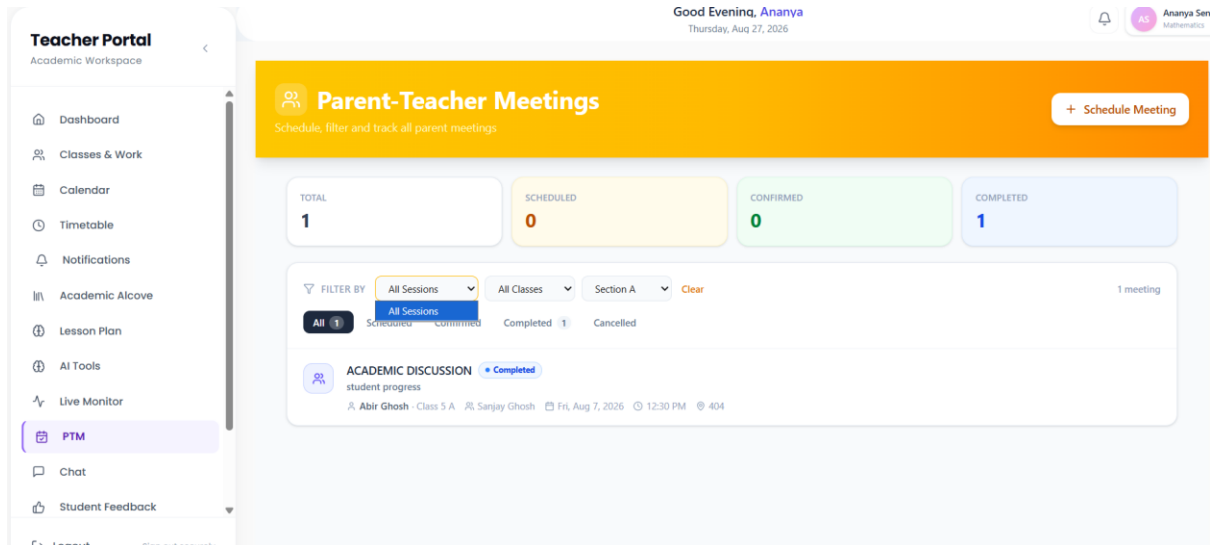

In **Classes & Work** → **Students** → **Achievements**, the **Class** dropdown is not loading or showing any available class options. It only displays “**Select class**”, so the teacher cannot select a class and continue with the achievement process.

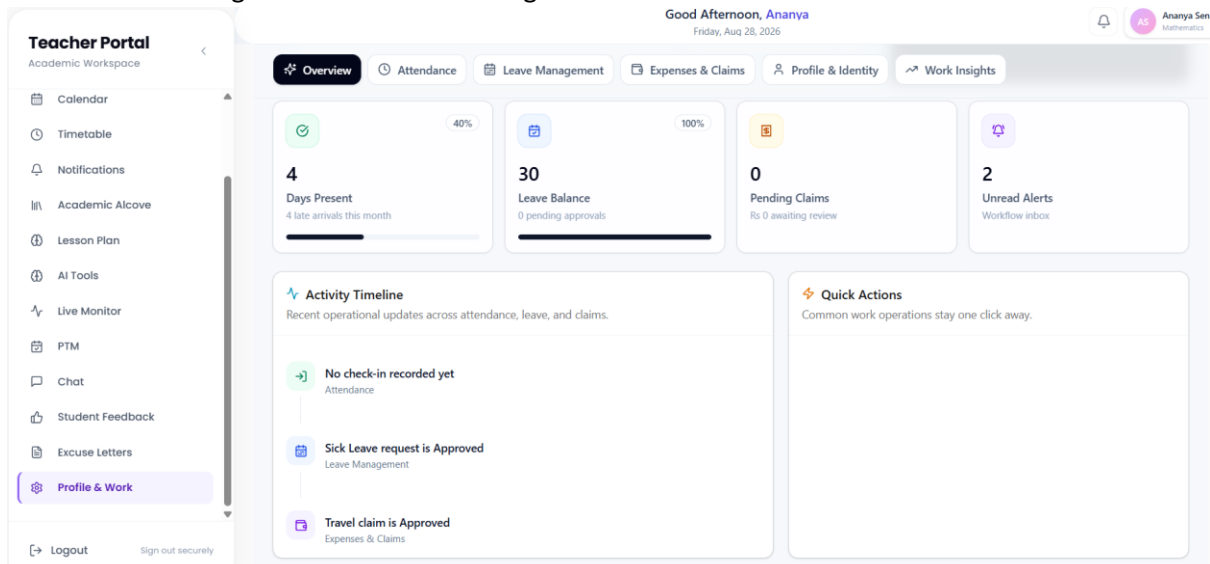

Issue in the Assigned Class Teacher → Timetable section:

The “**Busiest Day**” information is not displaying correctly. It shows **Monday with 3 scheduled classes**, but the data should accurately reflect the timetable and scheduled classes assigned to the class teacher.

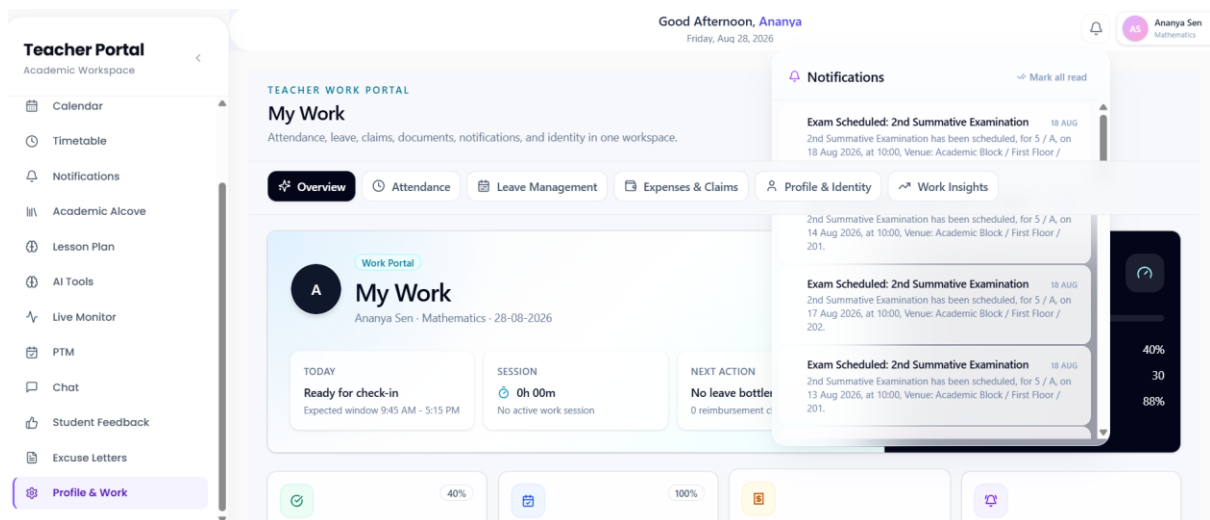

Issue in the Assigned Class Teacher → PTM section: The session filter dropdown is not functioning properly. When opened, it only shows “All Sessions” and does not display or load the available sessions for filtering Parent-Teacher Meetings.

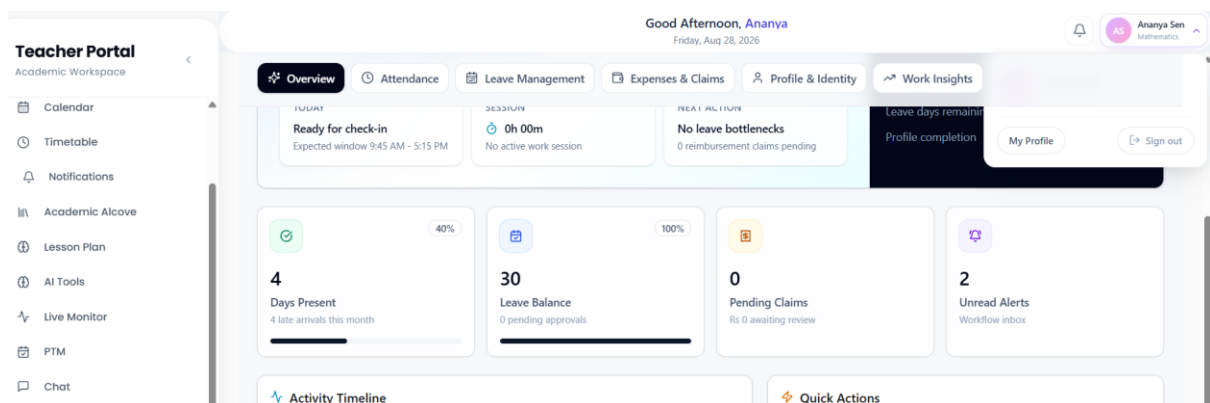

Issue in the Assigned Class Teacher → Profile & Work → Overview section: The Leave Balance card shows 30 days, but the “0 pending approvals” status may not be displaying the correct information. The leave balance and pending approval data should be properly synced and updated.

or

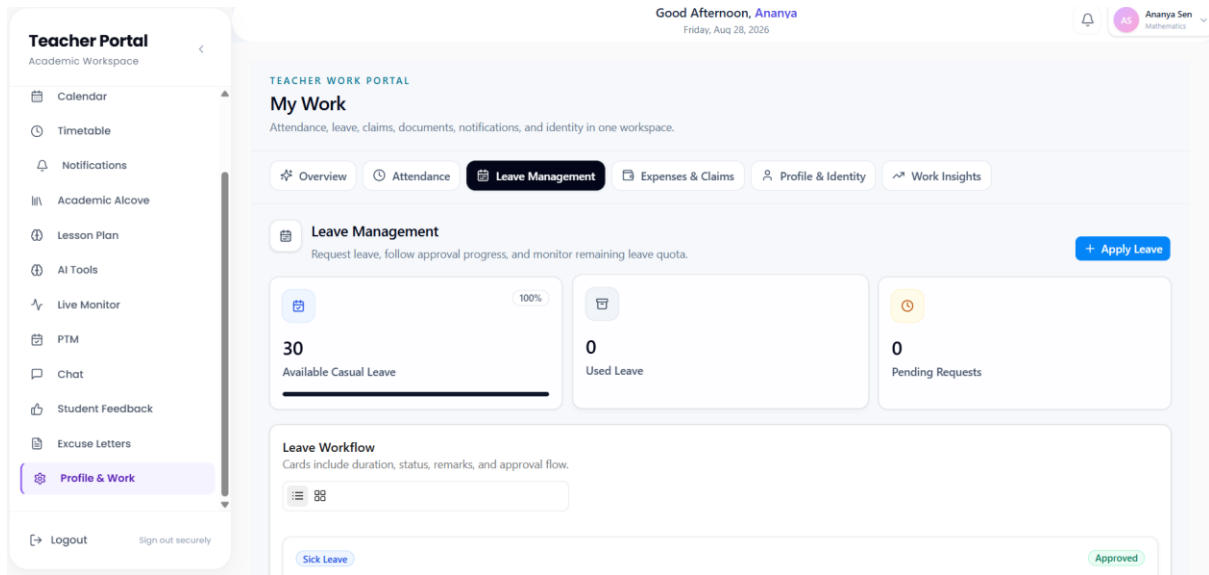

Issue in the Assigned Class Teacher → Profile & Work → Overview section: The Unread Alerts count always shows 2 alerts and does not update or change based on the actual alert status.

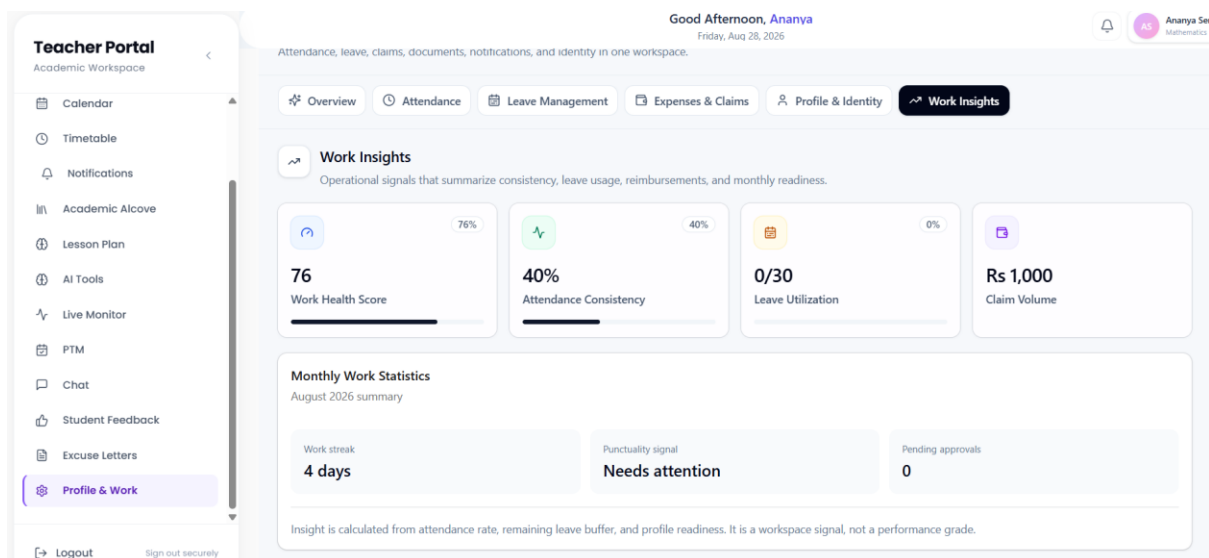

Issue in Assigned Class Teacher → Profile & Work → Notification: The Notification panel in the top navigation bar overlaps and covers the Profile & Work navigation tabs, such as Overview and Attendance. The notification dropdown should be positioned correctly and should not hide or block any navigation items.

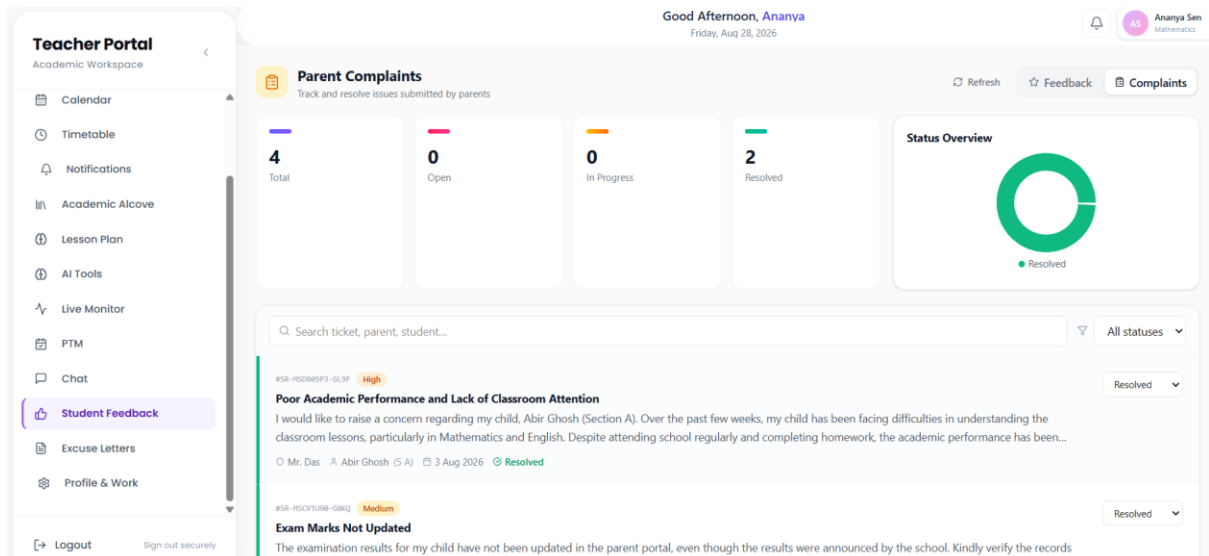

Issue in Assigned Class Teacher → Profile & Work: The profile icon/dropdown is not positioned correctly and overlaps the page content/navigation area. The profile menu should open properly without covering or blocking other UI elements.

Issue in Assigned Class Teacher → Profile & Work → Leave Management: The **Used Leave** count is showing **0**, even though an approved leave request is visible in the **Leave Workflow** section. The system is not correctly calculating and updating the used leave balance after leave approval.

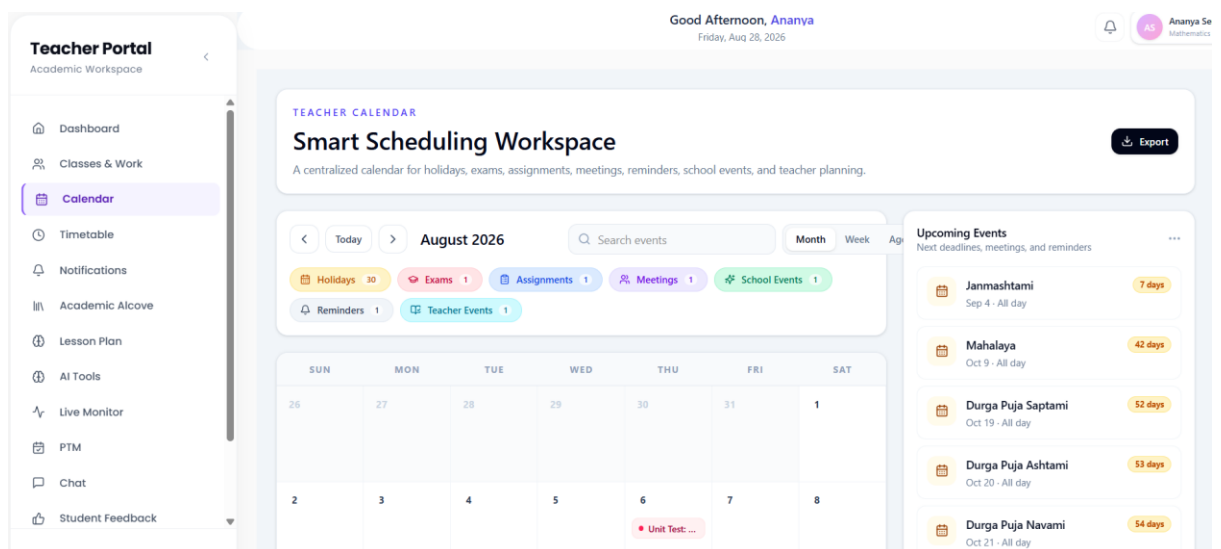

Issue in Assigned Class Teacher → Profile & Work → Work Insights: The **Leave Utilization** is showing **0/30 and 0%**, even though an approved leave request exists. The leave utilization should be calculated correctly based on the approved/used leave days and should update automatically.

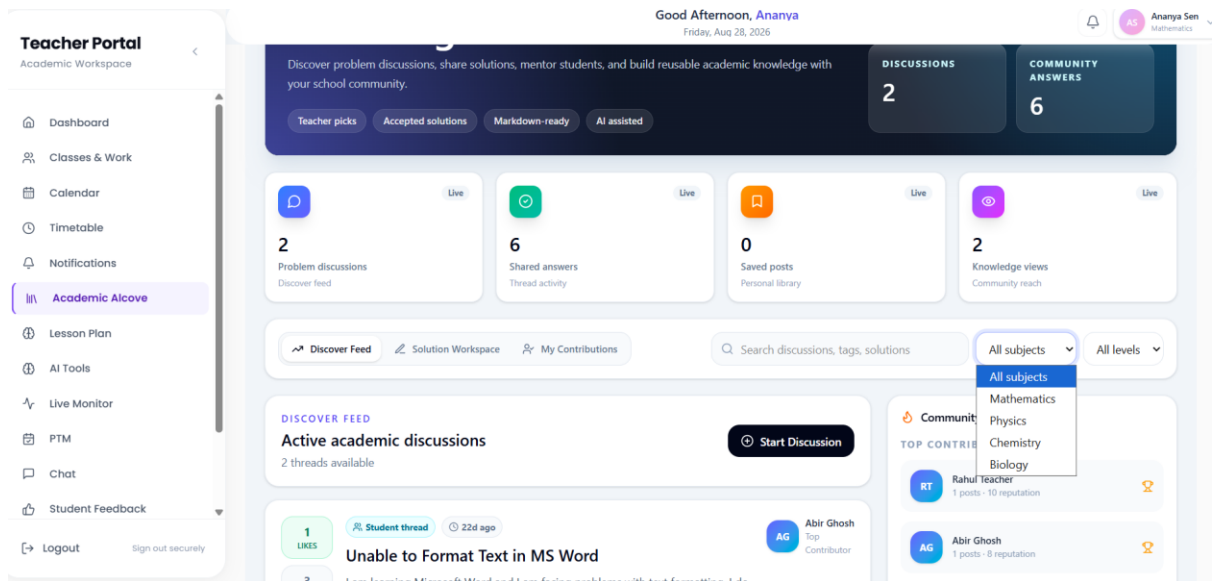

Issues in Assigned Class Teacher → Student Feedback → Parent Complaints:

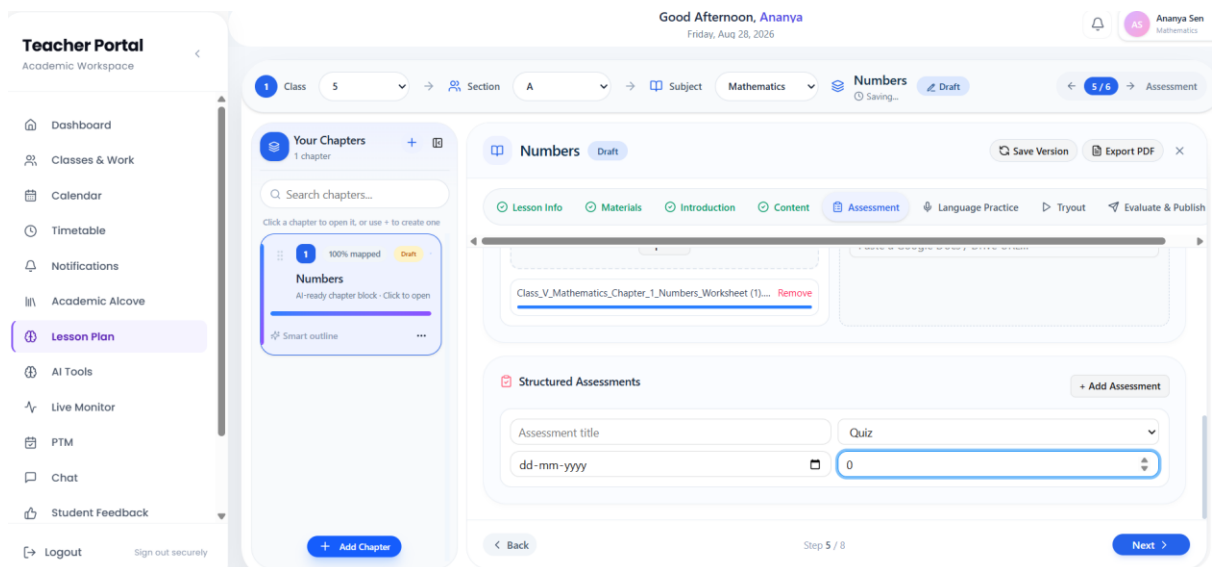

1. **Incorrect parent name:** The complaint details display “**Mr. Das**” instead of the actual parent/father name. The system should fetch and display the correct guardian/father name associated with the student, including any updated name changes.

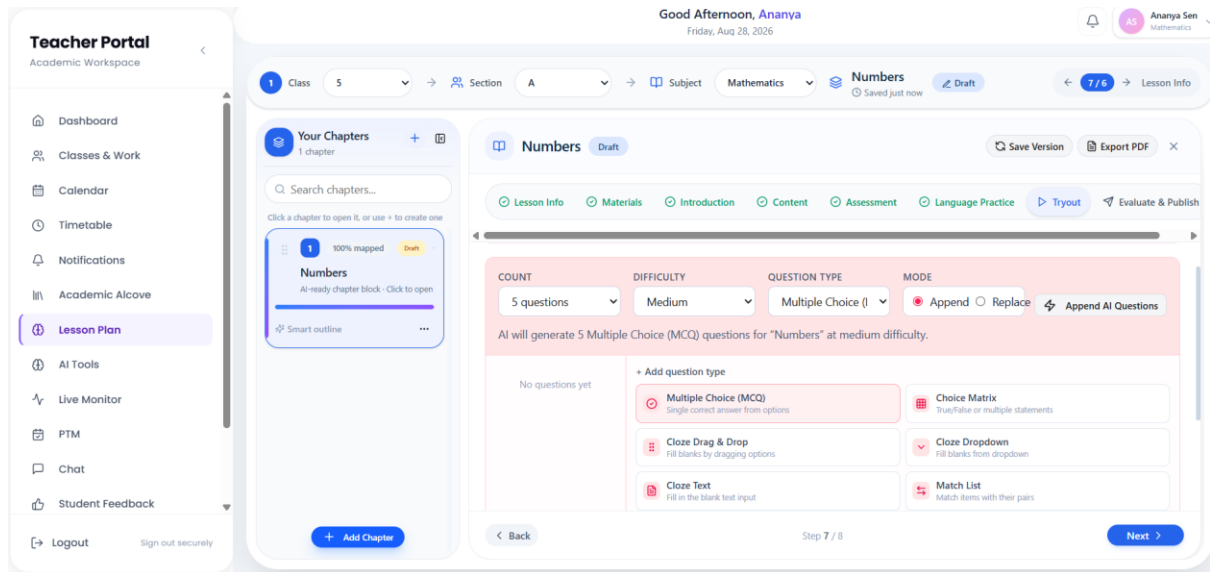

Issue in Assigned Class Teacher → Calendar: The view switcher is not fully visible. The **Month, Week, and Agenda** options are partially hidden/cut off, making it difficult to access all calendar views. The layout should be responsive and display the complete navigation options properly.

Issue in Assigned Class Teacher → Academic Alcove: The Session, Class, and Subject fields should be available here. These details should be displayed according to the teacher's assigned session, class, and subject.

Issue in Assigned Class Teacher → Lesson Plan → Assessment: In the Structured Assessments section, the Quiz field is automatically showing "0". The default value 0 should be removed, and also here negative count the field should remain blank/empty until a quiz value is entered by the user.

Issue in Assigned Class Teacher → Lesson Plan → Tryout: The **Mode** section has a UI layout problem. The **Append** and **Replace** radio buttons are not displaying properly and appear too close to the surrounding elements. The layout should be fixed so that both options are clearly visible, properly aligned, and have sufficient spacing within the Mode field.
